

# Technocracy Rising: The Trojan Horse of Global Transformation – Chapter Highlights

---

*The dark horse of the New World Order is not Communism, Socialism or Fascism: It is Technocracy.*

**Author: Patrick M. Wood, 2014**

## **Introduction**

The main premise of this book is that when the Trilateral Commission was founded in 1973, it quietly adopted a modified version of historic Technocracy to create what it called a “New International Economic Order.” As a result, Technocracy is now the dominant meme of global transformation. This book connects the dots on the largest, most insidious and most wrenching transformation of global society that the earth has ever experienced.

## **Chapter 1 - The Backdrop for Technocracy**

Ideas matter. Giving a short background on the philosophies that gave rise to Technocracy is essential, including Positivism, Scientism, Progressivism, Darwinism, and Fascism.

## **Chapter 2 - From Passion to Meltdown (1920-1940)**

The historical record of early Technocracy from the 1920s and 1930s was not well preserved. The author spent hundreds of hours pursuing original research in university archives and on-location visits. This provides a chilling view of what was done, by whom, and to what ends.

## **Chapter 3 - The Trilateral Commission**

The author and the late Professor Antony C. Sutton have been the de-facto experts on the Trilateral Commission, its members and policies since the late 1970's. This chapter traces the activities of this group and its members, to show their involvement in modern Technocracy.

## **Chapter 4 - Transforming Economics**

The Trilateral's New International Economic Order, based on historic Technocracy, is using Sustainable Development and Agenda 21 to create a new, post-capitalist “green economy” that is based on energy production and consumption. This chapter details this transformation.

## **Chapter 5 - Transforming Government**

To facilitate the new “green economy”, it is necessary to transform government to be compatible. This was started by Trilaterals Bill Clinton and Al Gore with their “Reinventing Government” initiative during the 1990s.

## **Chapter 6 - Transforming Religion**

Efforts to align the various ecumenical religions of the world into a single system that would be compatible with a transformed economic system and government is well underway. This chapter details the movement, including the spread of religious humanism through the Aspen Institute for Humanistic Studies, currently known as the Aspen Institute.

## Chapter 7 - Transforming Law

Traditional Western Rule of Law is incompatible with Technocracy's new system of governance and economics. This chapter analyzes Reflexive Law and how it is being used to implement and enforce the terms of Technocracy.

## Chapter 8 - Transforming Energy: Global Smart Grid

Technocracy requires ironclad control over the production, distribution and consumption of energy. Smart Grid implemented in the U.S. is based on smart meters that communicate with home appliances and with local utilities up to the Department of Energy in Washington, D.C. This chapter also shows how the global smart grid is rapidly being implemented to tie all continents together.

## Chapter 9 - The Total Surveillance Society

Technocracy also requires complete surveillance and monitoring of all activity within the new economic/political system. The push for Total Information Awareness is a direct result of technocrats creating the infrastructure for the comprehensive crossover to Technocracy.

## Chapter 10 - Transforming Humanity

If the pillars of society are transformed (economic, political, religious), then the next step is to transform humanity itself. This chapter provides a brief introduction to what it means to be Transhuman, and what Transhumans are doing, through science and technology, to achieve immortality and omniscience.

## Chapter 11 - Taking Action

How can Technocracy be rejected? This chapter details why we have had no success in turning the tide of societal transformation and why we must pursue a very different strategy than merely focusing on legislative and state or national election issues.

## Chapter 12 - Conclusion

Wrapping it all up, this chapter shows how China, the European Union and other nations have already been transformed into a Technocracy and what it means to us. American's rejected Technocracy in the 1930s and they could do so again, but only if Technocracy is seen for what it is: A direct path to scientific dictatorship and totalitarian control.

## Bibliography

An extensive list of books and papers relating to Technocracy, the Trilateral Commission and globalization.

## Appendix I - Transforming Christianity

This chapter exposes the connection between Peter Drucker's beloved philosophy of Communitarianism and the modern megachurch movement. A non-Christian, Drucker teamed up with Christian businessman Bob Buford, to revitalize Buford's Leadership Network organization. Early Drucker disciples include megachurch pastors Rick Warren and Bill Hybels.

## Appendix II - 1979 Interview with Director of Trilateral Commission

This is a transcript of a 1979 radio interview with George Franklin, Coordinator of the Trilateral Commission, Antony C. Sutton and the author. It gives a window into the evasive and illusive nature of the Trilateral mindset.
